

Shop 9

Shop 9 is an introduction to basic shop procedures and processes. It will include exploration of a number of relevant shop practices and skills that are expected in the trades and generally in the world of work. These include:

- safety
- design and planning
- measurement and layout
- hand tool skills
- power tool use
- computer assisted tool use
- assembly procedures
- finishing

It is expected that students demonstrate standard on the job attitudes and skills throughout the course. Coming to class on time, prepared and committed to the lessons and the course is a must. Accountability will be a common theme and all work must conform to policy and guidelines set by the instructor. Assignments will include safety tests, worksheets practical projects and demonstrated skills. Evaluation will be based on the theoretical and practical application of the above organizers.
